

Computer assisted semantic annotation in the DutchSemCor project

STEP 1-Preparing lexical data and corpus data to align. If necessary pre-editing the CORNETTO lexical database.

1. arm
2. jacht
3. slag
4. zien
5. woord
6. eten
7. donker

Coordinator of project

CORNETTO

Lemmas to annotate

STEP 2-Annotators use **Semantic Annotation Tool (SAT)** to align lexical data from CORNETTO to corpus.

Annotator 1

Annotator 2

Semantic Annotation Tool (SAT) - <http://cornetto.science.uva.nl:8080/dutchsemcor/>

STEP 3-Log-file, analyzing annotations and discussing differences

SoNaR Tags, count is 1976

Log-file

Discussion

Unique vs. Overlapping annotated examples
Inter-Annotator Agreement vs. No Inter-Annotator Agreement

STEP 4-Follow-up annotation round(s) until reaching 80% < IAA. If necessary post-editing CORNETTO.

Aim of the project: a Dutch semantic corpus with high quality, diversity and quantity text material

- 1 million tokens with semantic annotation (250K annotated manually, 750K annotated semi-automatically);
- Semantic and syntactic diversity of annotated corpus examples.
- High quality syntactic and lexical semantic information
