

So This Is DutchSemCor Now Go Use It!

Antal van den Bosch

DutchSemCor Workshop, October 25, 2012, VU Amsterdam

DutchSemCor: Milestone in a Marathon Run

- Initial resource and tools development, circa 2000
 - EuroWordNet, Cornetto
 - WSD
 - NER
- STEVIN day at Willem II stadium, 2004
 - Wouldn't it be nice to...
- DutchSemCor, 2007-2012
 - NWO GW Startsubsidie
 - NWO GW Middelgroot Investment
- Next steps

Next steps

- Corpus exploitation
 - Linguistic research
 - Lexical – distributional semantics; figurative/idiomatic use; separable verbs
 - Besides Wikification (disambiguation), link to other LinkedData
 - Test the One Sense per Discourse/Domain/Genre hypothesis
 - 2-polysemous
- Further development of WSD
 - Based on corpus
- Integration of WSD
 - In Machine Translation (and: words vs phrases; translations vs sense IDst)
 - In Text Analytics
 - In Computer-Assisted Language Learning
- Enrichment of corpus
 - Co-reference
 - Semantic Role Labeling

Lessons learned

- Human role is vital
 - Hard work of annotators provided annotations but also crucial feedback
- Human-machine co-development is not trivial
 - Active learning has pitfalls
- How much data is enough for machine-learned WSD?
 - Very little!
 - At 5 examples per sense: 69%
 - At 10 examples per sense: 76%
 - At 20 examples per sense: 82%
- Conflicting goals (LREC 2012)
 - Balanced senses; balanced contexts
 - A minimal number of different examples per sense
 - Representative sample of occurrences
 - Frequency of different senses

Thanks

- To the annotators
- To the DutchSemCor developers

Now go and use it!

But first: Drinks!
